

ABSTRACT

The server apparatus (120) includes a CPU (121), a RAM (122), a cipher processing unit (123) for carrying out encryption and decryption, a communication processing unit (124) for carrying out
5 communication with an information processing terminal (100), a data storage unit (125) for storing information that does not require confidentiality, a distribution information storage unit (126) for storing information such as a program to be distributed, and a specific information distribution history holding unit (140) for
10 holding a specific information distribution history (600) for managing a record of a program specific information of a program previously distributed to the information processing terminal (100).
